

Game NPC Voice AI ▾

<https://www.ntik.me/posts/voice-agent> Is there a repo?
Can you replicate what he did for me with local resources?
Is there anything better out there?

I found the article. Unfortunately, **Nick Tikhonov did not publish a public repository** for this project - it's described as a "from scratch" build for educational purposes. However, I can absolutely help you replicate this architecture using local resources (local LLMs, local TTS, local STT) and point you to better/alternative approaches.

Let me search for current best practices and open-source alternatives that achieve similar or better results:

Search | open source voice agent local LLM TTS STT 2... 24 results >

Based on the article and my research, here's what I found:

No Public Repo Available

Nick Tikhonov's project was a "**from scratch**" **educational build** - he did not publish a public repository. The article is the documentation. However, the architecture is well-documented enough to replicate.

Replicating with Local Resources (Fully Local Stack)

To replicate Nick's sub-500ms latency voice agent using **only local resources** (no cloud APIs), here's the optimal 2025 stack:

Throw me a hard one. I'm ready.
